

Ubig Pos

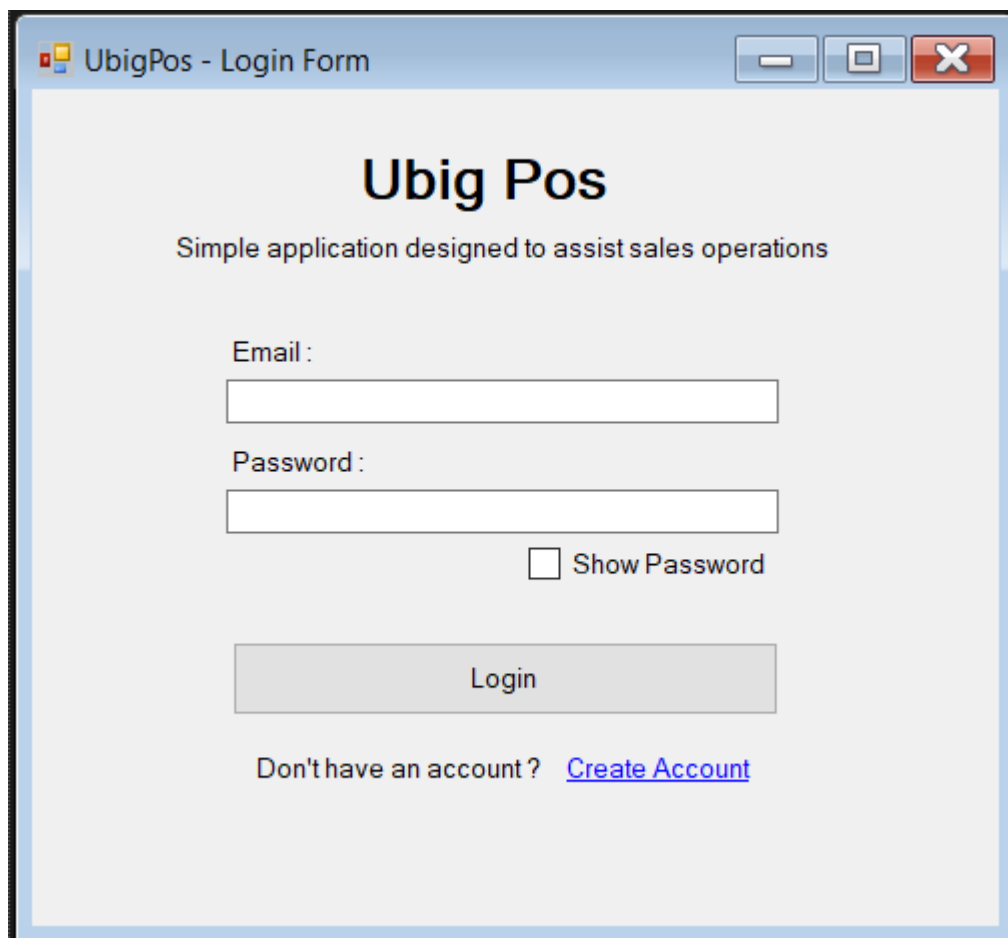

- 1) For this module, you must **use the given sql file to run DDL and DML for creating database used for this module**. Please check the sql folder given inside the test project. **You must not modify structure of the database and tables**. However, **you are allowed to modify (such as insert, update, or delete) the records**. However please note that marking process will not be using your modified database.
- 2) You must submit **the whole C# Project**. Pay attention to the **local resource files** you may add during your works (for example image files) if it needs to be included in your project submission.
- 3) Make sure your project **capable to run even in different environment setup**. During marking process, we may as far as try to modify your **string connection** as needed. After that, if we found that your **project cannot be compiled, the zero mark will be given** instead.
- 4) Create a project with the name '**D2W4_YourFirstName_School.zip**'.

Entity Relationship Diagram

To make it easier for you to understand the database structure, Database Designers from UbigPos provided you an Entity-Relationship Diagram (ERD). This diagram will explain the concept and representation of the data model that is used in the database

1. Login Form

The image shows a screenshot of a web browser window titled "UbigPos - Login Form". The window has a light blue header bar with standard minimize, maximize, and close buttons. The main content area is light gray and contains the following elements:

- A large heading "Ubig Pos" in bold black font.
- A subtitle "Simple application designed to assist sales operations" in a smaller black font.
- An "Email :" label followed by a white text input field.
- A "Password :" label followed by a white text input field.
- A checkbox labeled "Show Password" located below the password field.
- A gray "Login" button centered below the input fields.
- A link "Don't have an account ? [Create Account](#)" at the bottom.

This is the first form that will be used by the user to login to the application. Registered users can login to the system with their email and password combination.

- Users can login to the application by filling their **email** and **password**.
 - o If the combination exists in the database, the user will be directed to the **main dashboard** of the application.
 - o If the combination doesn't exist in the database, let the user know.
- Put a **toggle** for users to **show the password** that they typed.
- New users can **register** themselves by clicking the "**Create Account**" link below

2. Register Form

UbigPos - Register Form

Create Account

Fill in below information to complete your registration

Information

First Name

Last Name

Email

Password

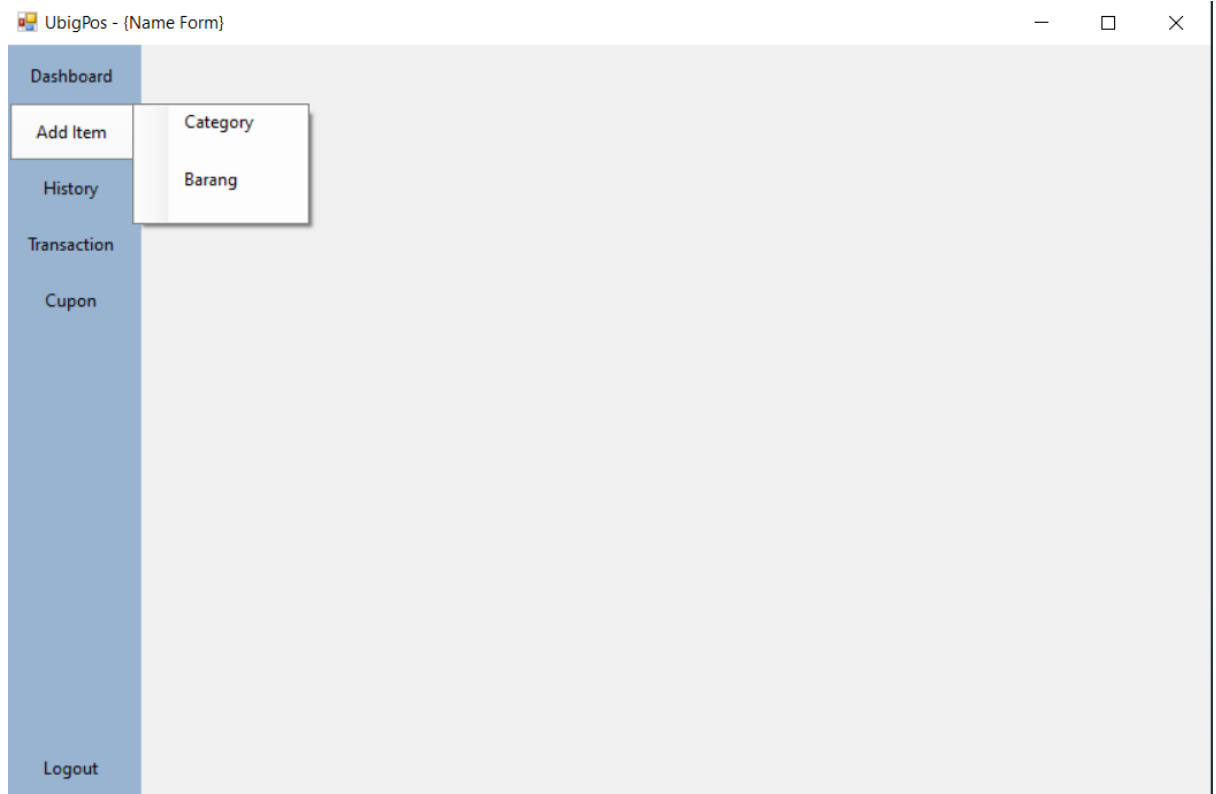

Create Account

Already have an account? [Login](#)

In this form, user can register an account by filling some informations.

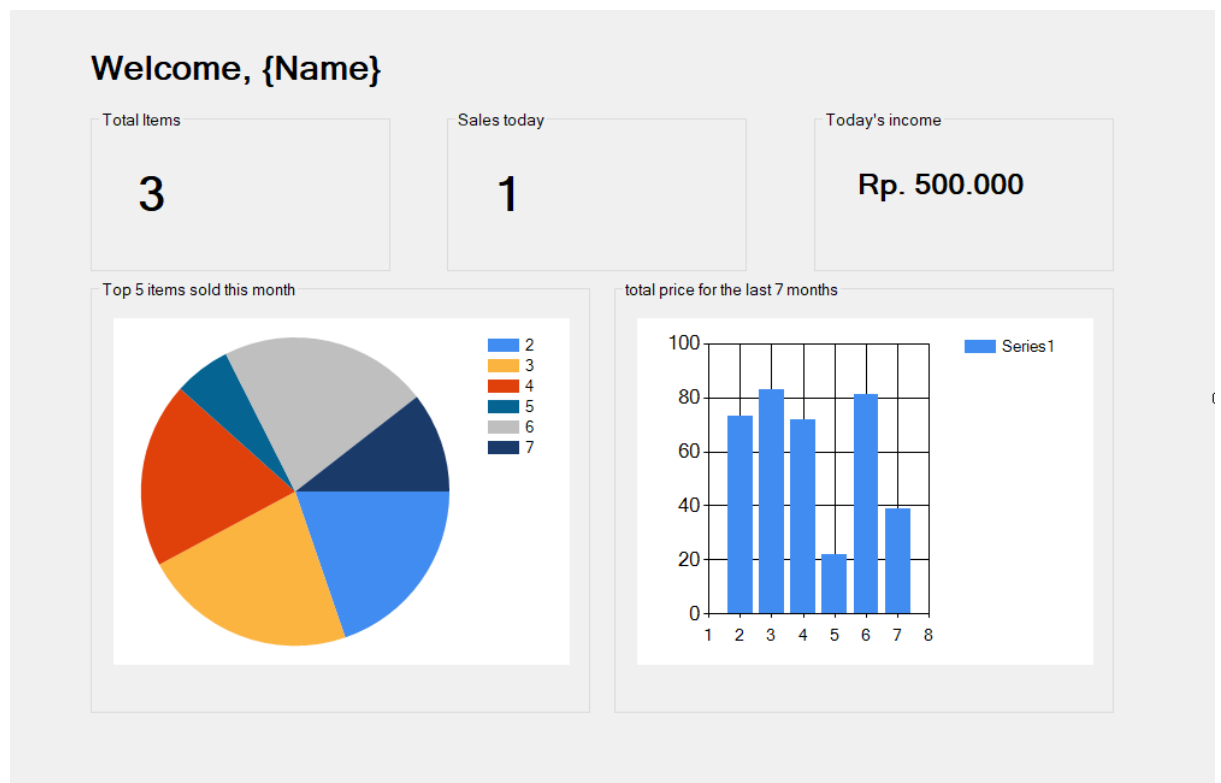

- **Username** and **Email** must be unique (must not registered to the database before).
- **Password** should have **minimal four characters**.
- When users **successfully registered** their account, **direct** user to the **main dashboard**.
- Users can also **go back** to the login form by clicking "**Login**" link.

3. Main Menu

In this main menu there are several menus, when the menu is **clicked** it appears in the **panel** to the right of the menu

4. Menu Dashboard

- **Show** the user FirstName and LastName
- **Show Total Item** displays the count of all items in the database
- **Show Sales Today** displays today's total sales
- **Show Today's Income** displays total sales income for today
- **Chart Pie** displays the 5 highest selling items this month
- **Chart Columns** displays the total price of the last 7 months of sales

Design and implement a form called History Sales Form which has a date range filter feature. This feature allows users to view transactions based on date ranges. The form must meet the following specifications:

- There are two datetimepicker elements to select the start date and end date.
- Make sure the end date is not smaller than the start date. If this rule is violated, display an error message.
- Displays transaction data in the selected time range.

Code Cupon

Save

1. Open Transaction Form

- User sees an empty cart (DataGridView), "Search Item" button, coupon input, total price, and "Checkout" button.

2. Add Items to Cart

- Click "Search Item" → "Select Item" dialog opens.
- Select items → Items are added to the cart.
- Validate stock: Display error if quantity exceeds stock.

3. Enter Coupon

- Enter coupon code.
- If valid, apply discount. If invalid, show error.

4. Checkout

- Click "Checkout".
- System validates: Basket cannot be empty, item quantity matches stock.

Create a Coupon Form to manage discount coupon data. This form must have the following elements and feature:

- Coupon Code input only accepts capital letters, must be filled in.
- The Discount (%) input only accepts positive numbers in the range 0–100.
 - **Price After Discount = Initial Price - (Discount × Initial Price / 100)**
- The Start Date and End Date input must be valid, with the End Date being greater than the Start Date.
- Display an error message if the input does not match.
