Your perfect movie ticket companion

Tiks.id is a streamlined movie ticketing platform that lets users explore current and upcoming films, complete with trailers, ratings, and showtimes. With its intuitive interface, users can browse a list of movies and receive personalized recommendations.

Ticket purchasing is straightforward, offering a smooth selection process for show dates, times, and theater locations. Each theater on Tiks.id has distinct seating options, different rows and columns combination, allowing users to customize their viewing experience.

A comprehensive Ticket List feature ensures easy access to purchased tickets, displaying details like theater location, showtime, and seating, with options to download or share tickets for a hassle-free entry. With multiple payment options, Tiks.id provides a seamless, enjoyable experience from choosing a film to taking a seat.

Contents

This test project consists of these files:

1. TP.pdf
2. TP_Style.pdf
3. Database.sql
4. Resources

Instructions

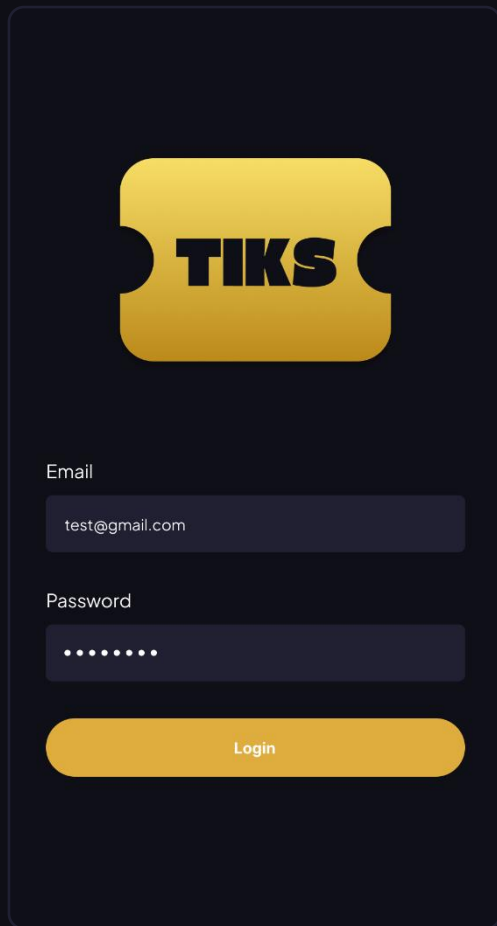

You are instructed to create an android application for Tiks.id. Analyze the required *general validation* that is needed to ensure a comfortable user experience. The database team already provided you the database schema. But since the Backend Team are taking some breaks, so you need to develop the API by yourself. The details of the application are listed below.

Entity Relationship Diagram

To ensure that you have a clear visualization of the database, here is the entity relationship provided by the database team to help you understand better.

1. Login Screen

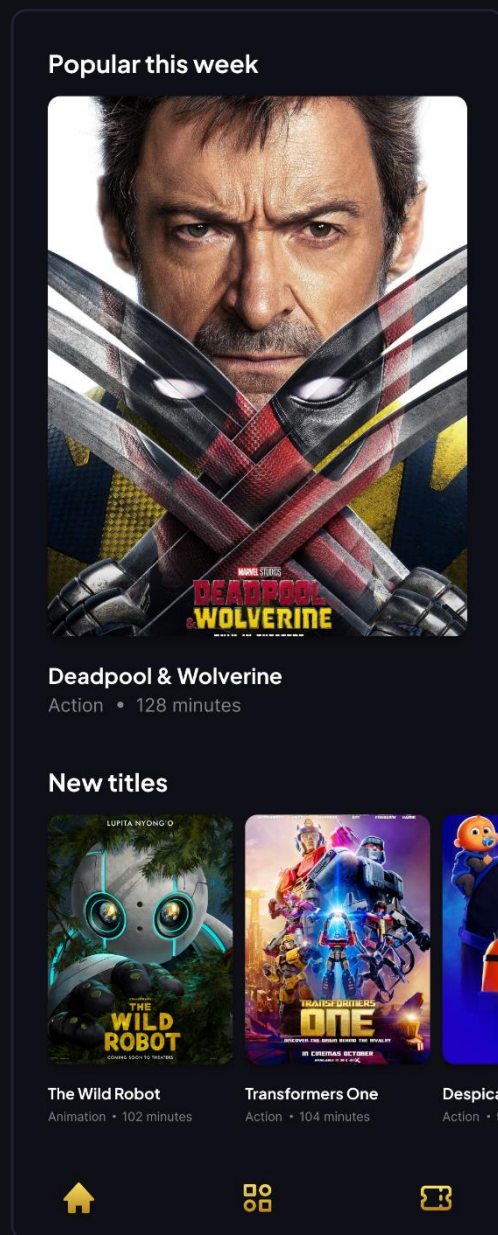

The image shows a login screen for an application named 'TIKS'. At the top center is a yellow rounded rectangle with the word 'TIKS' in bold black letters. Below this, there are two input fields. The first is labeled 'Email' and contains the text 'test@gmail.com'. The second is labeled 'Password' and contains seven dots. Below the password field is a yellow rounded button with the text 'Login'.

This is the first screen that will be shown to the users. User can login to the application by using their email and password combination stored in the system.

After a successful login, user will be directed to the home page.

2. Home Screen

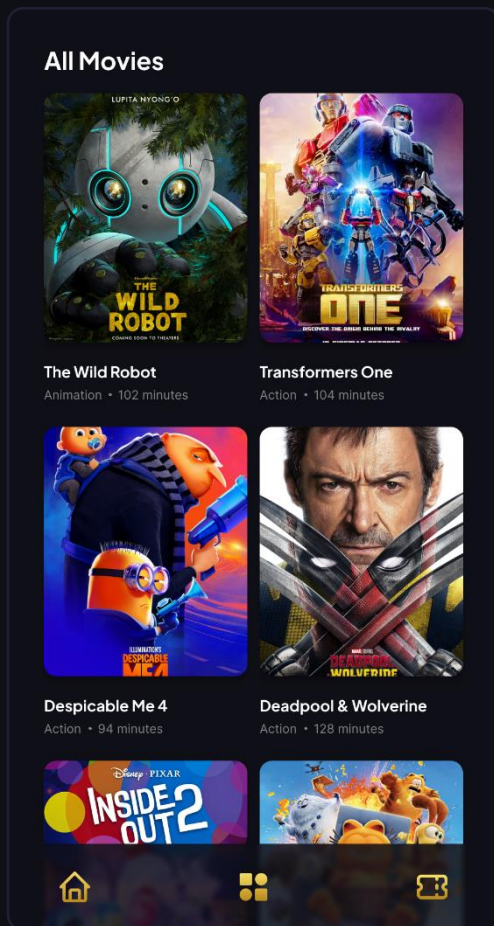

This home screen will show the most popular movie in this week and show the newly released movie list below.

- If there is no most popular movie in this week, then just show the most recently released movie.
- The newly released movie is shown and ordered by the release date.
- Only the first alphabetically ordered movie genre is shown on the list.

Clicking one of the movie will bring the users to a page where they can see more detail of the selected movie.

3. Browse Movie Screen

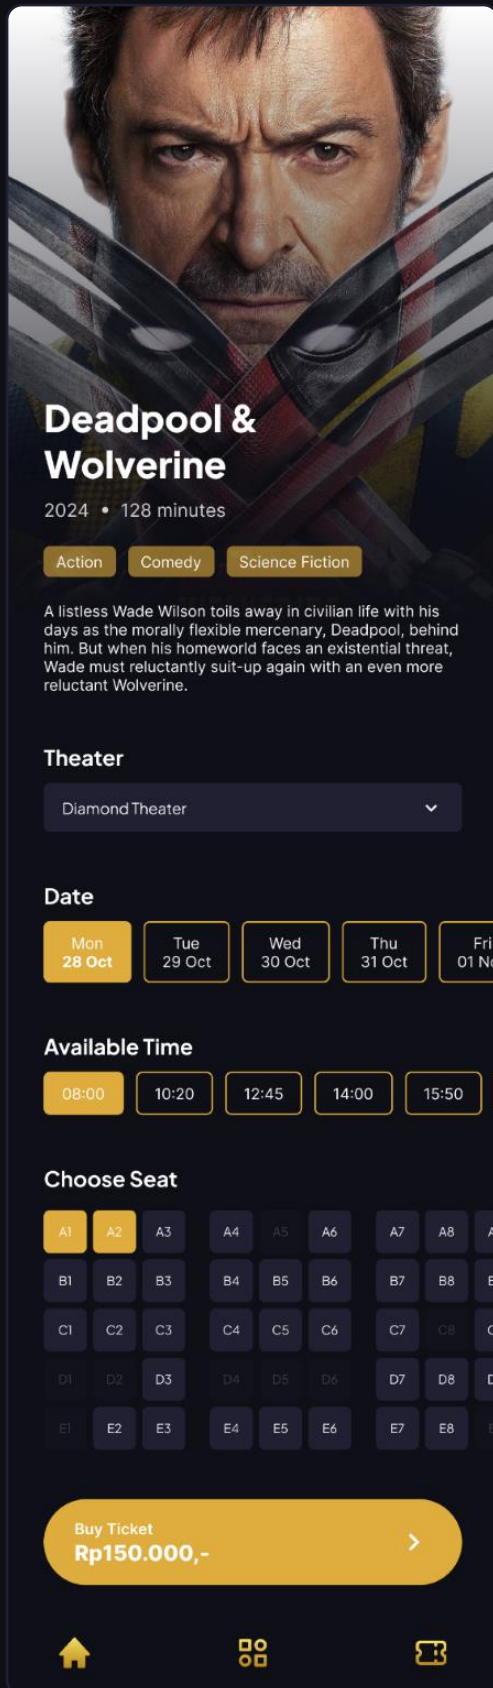

This screen allows user to browse all the movies.

- The movie list is shown and ordered by the release date.
- Only the first alphabetically ordered movie genre is shown on the list.

Clicking one of the movie will bring the users to a page where they can see more detail of the selected movie.

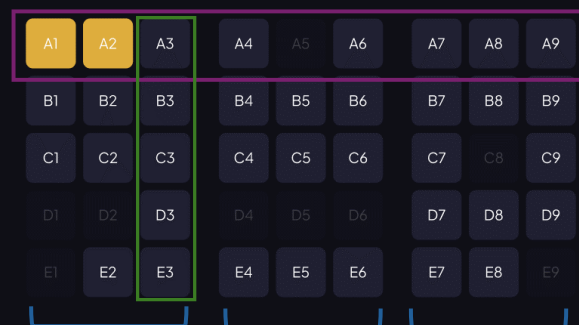

4. Movie Detail Screen

This screen will show the selected movie's details. Users can select a theater, the date and time, and the seat preferences to watch the movie. Show only the available theater, date, and time arrangements for the selected movie. Show all the genres of the selected movie ascendingly.

For each theater, the seats positioning and arrangement is different from each other.

- Each theater has different section, column, and row count.

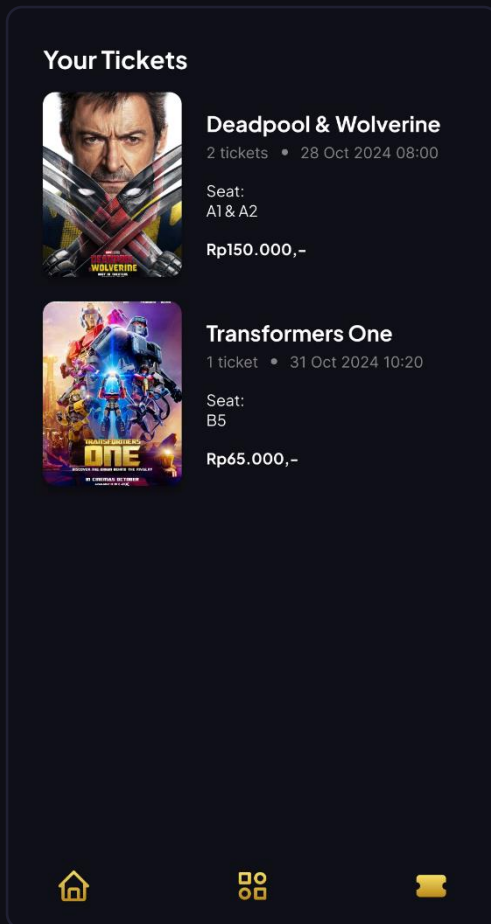

- Section
- Column
- Row

- Highlight the selected seat(s) and the unavailable seat(s) by using different colors to bring better user experience for the users.
- Calculate the total price for the tickets based on the selected seat(s).
- User can proceed to buy the selected ticket by clicking the button, and user will be directed to the ticket list screen.

If there are no available theater, date, and time arrangements for the movie, show an information box at the bottom of the movie information.

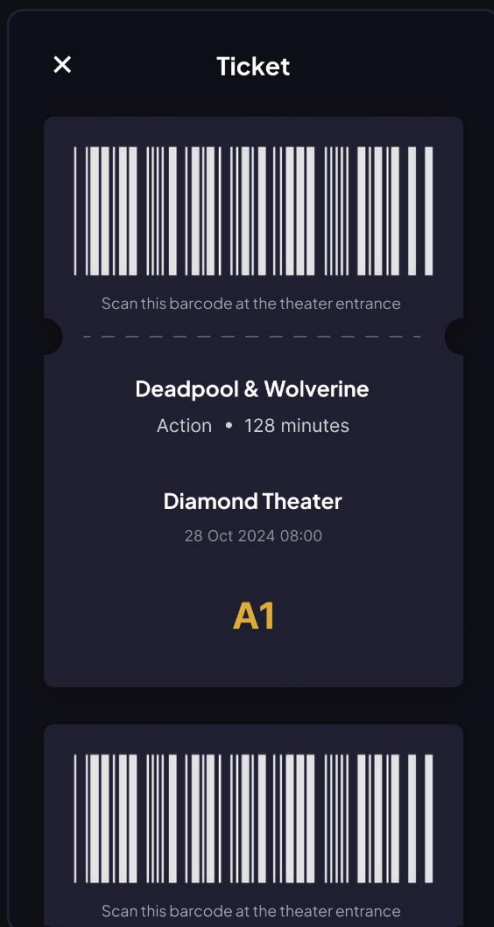

5. Ticket List Screen

This screen will show a list of the tickets that the user already bought. The tickets will be shown and ordered by the purchased show date and time (the closest will show first).

Clicking one of the ticket will direct user to the ticket detail screen.

6. Ticket Detail Screen

This screen will show the detail of the ticket bought the user.

- Only the first alphabetically ordered movie genre is shown on the ticket.
