Introduction

Voto is a popular local camera shop near downtown. They sell various type of cameras, starting from the old-school analog one, till the newest generation digital camera. The cameras are handled and checked by the professionals to ensure the quality of their product. And with word of mouth promotion, the shop popularity is highly increasing day by day. More and more customers are coming to buy their camera for various needs. Some are purchased for personal use, for gifts, and even for their beloved ones that live in another city or country.

Since their business is growing fast, they also want to expand their coverage to reach more customers. They are currently collaborating with the local expedition to send their product for online customers. They are also collaborating with other camera shop to gain more online customers, so they want to have a mobile application that can handle all those online transactions. Starting from displaying products, handling purchase transactions, to monitoring customer's purchase status. And to grab more attention for online customers, they also want to have a *fun feature* in the application.

You, as a developer are contracted to build the mobile application based on the details below.

General Requirements

- Project Criteria
 - The project name should be in this format: "MOBILE_XX", where XX is your workstation number.
 - Time management is a crucial thing for the success of this project. So, mind the given time and submit all your deliverables on time.
- User Interface Design
 - Consistently use the style guide given.
 - You can change some components as long as it doesn't affect the business process.
 - There are no additional points for extraordinary design.
 - Show scrollbar when the contents doesn't fit the screen comfortably.
- Validation and Error Messages
 - Your application should work properly and show meaningful error messages.
 - Analyze the validation that needs to be implemented, as this is one of the scoring criteria.
 - Any specific validation will be provided on the test project.
- Default Format
 - The de-facto standard, ISO compliant date format is YYYY-MM-DD

Instructions for Competitors

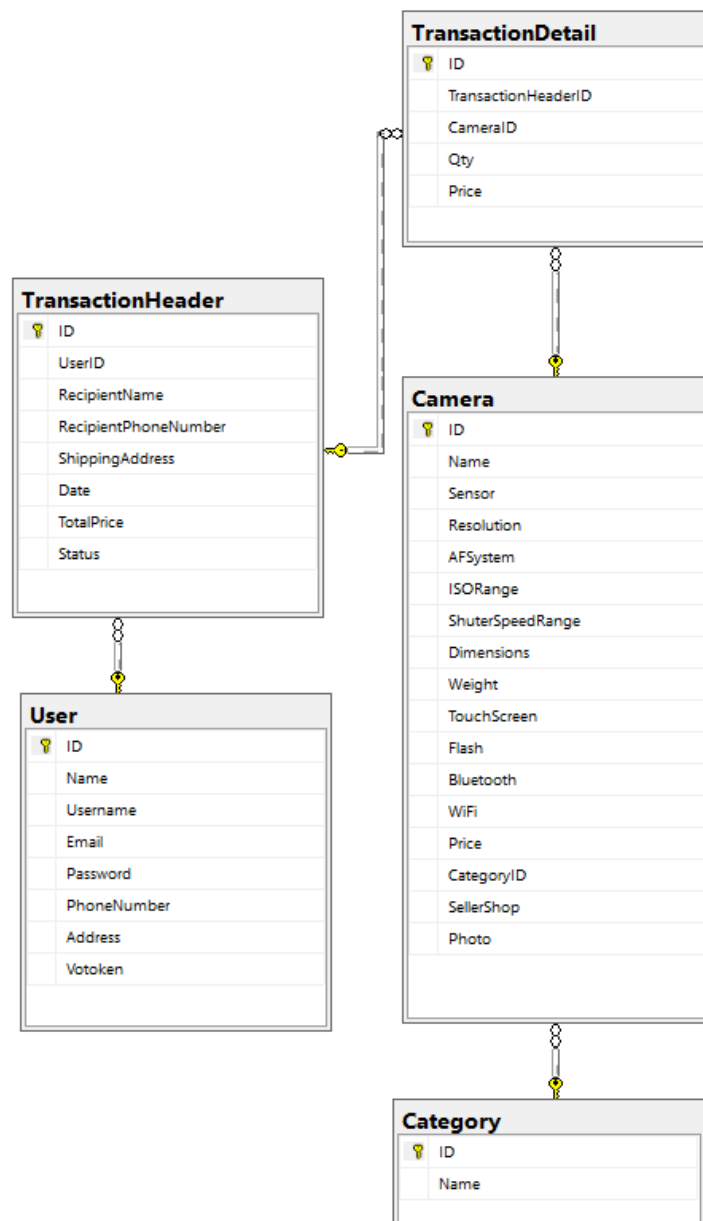

1. Utilize the Web API

For this test project, you are going to use the Web API given. You can access the web api through this link: <https://localhost:5000/swagger>.

2. Create the application and submit answer

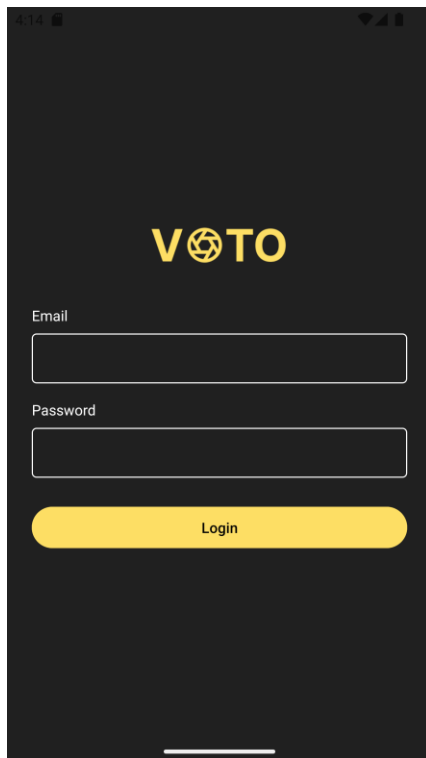

Create the requested mobile application based on the detail description on the next part of this test project. Submit all your answer/deliverables by compressing all your works (.zip) and upload it to the provided link.

Entity Relationship Diagram

To help further understanding for the structure of the database, the database designers provide an Entity-Relationship Diagram (ERD). This diagram explains the conceptual and representational model of the data used in the database.

1. Login Screen

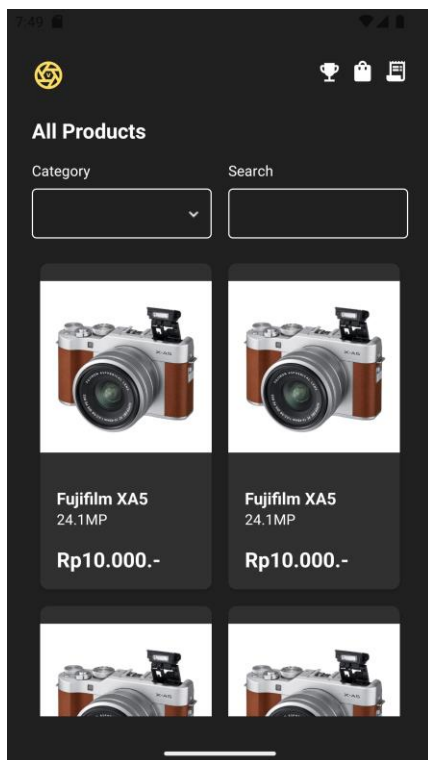

The application will start from this screen. Users can enter their credentials to login to the application. After entering the correct credentials, the users will be directed to the home screen.

Pre-generated users data:

Email	Password
mahdi@gmail.com	1234
jokar@gmail.com	1234

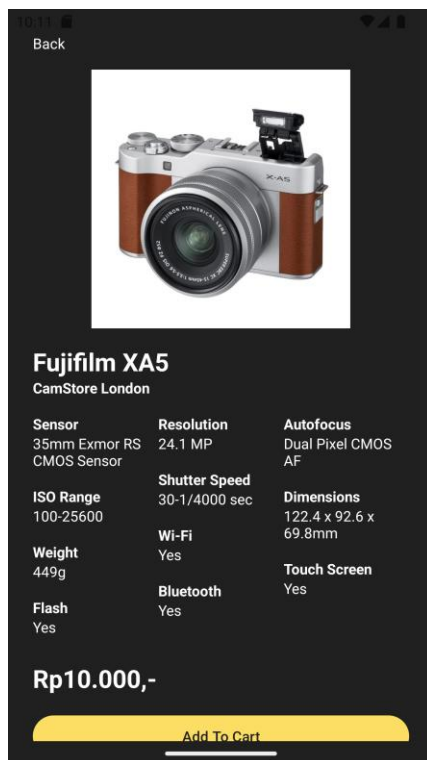

2. Home Screen

In this screen, the application will show a list of cameras. Users can filter the cameras based on the available categories. They also can specifically search for the camera name that they want to buy. By clicking on one of the items displayed, user can see the detail of that camera on different screen.

Users can see the items that has been added to the shopping cart by clicking the shopping bag icon. They can see their orders histories by clicking the receipt icon and draw a lucky spin by clicking the trophy icon.

3. Camera Detail Screen

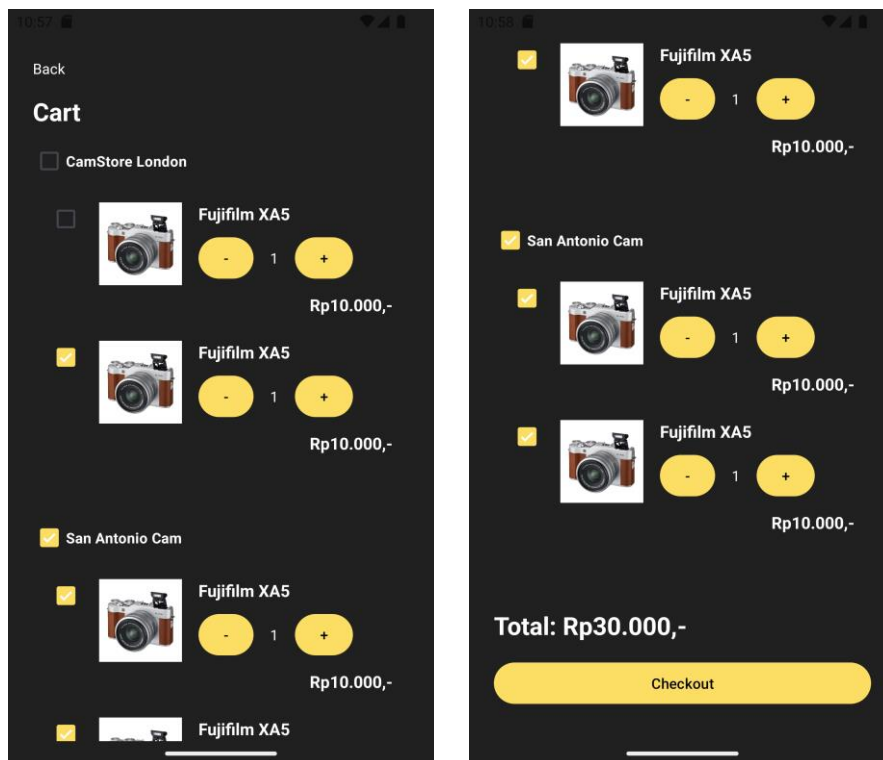

This screen will be shown after user clicks one of the item from the home screen. Users can see the camera details information.

- Camera sensor
- Camera resolution
- Camera autofocus system
- Native ISO range
- Shutter speed range
- Dimensions
- Weight
- Additional information (touch screen, flash, bluetooth, wifi)

If the users are interested to buy the camera, they can add the product to their shopping cart. When users are adding the same product that exists in their cart, it should add its quantity. After adding the product to the cart, user will be directed to the Cart Screen.

Users also can go back to home screen and browse another camera if they are not interested.

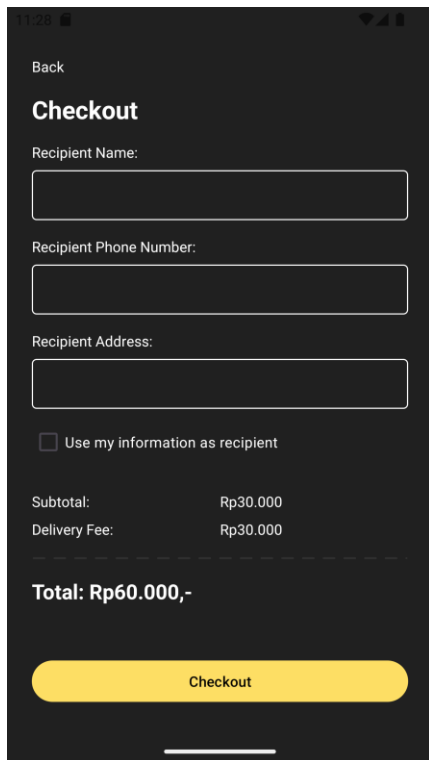

4. Cart Screen

Users can see the products that have been added to their shopping cart. They can add or reduce the quantity of the products. They can also remove a product from their shopping cart by reducing the quantity until reaches zero. The products in their shopping cart is grouped by the seller shop, so they can checkout all the products from one shop by just ticking the check box. But, additionally they also can select the item that they want to checkout one by one by themselves.

Users can go back to Home Screen to browse more camera.

5. Checkout Screen

The screenshot shows a mobile application interface for the checkout process. At the top, there is a 'Back' button. Below it, the title 'Checkout' is displayed. The form contains three input fields: 'Recipient Name:', 'Recipient Phone Number:', and 'Recipient Address:'. Below these fields is a checkbox labeled 'Use my information as recipient'. A summary section shows 'Subtotal: Rp30.000' and 'Delivery Fee: Rp30.000', followed by a dashed line and the 'Total: Rp60.000,-'. At the bottom, there is a large yellow button labeled 'Checkout'.

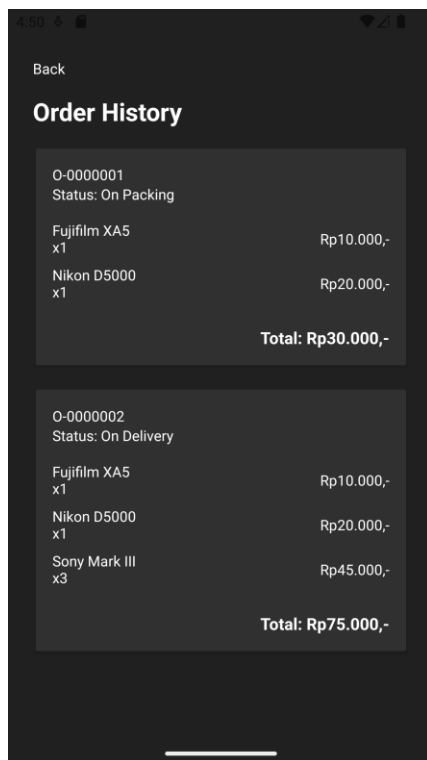

When users want to checkout the products from their shopping cart, they need to fill in the recipient information such as the recipient name, phone number, and address. To make the process easier and efficient, there is also an option to use the logged in user's information as the recipient information.

Users can see the total price of the products from their cart and the total final price after adding the delivery fee. The delivery fee is fixed at Rp30.000,-

After users successfully checkout the products, they will get some kind of points called "Votoken" that equals to 0.1% of the total price and user will be directed to the order history screen.

Users can cancel the checkout process by going back to the Cart Screen.

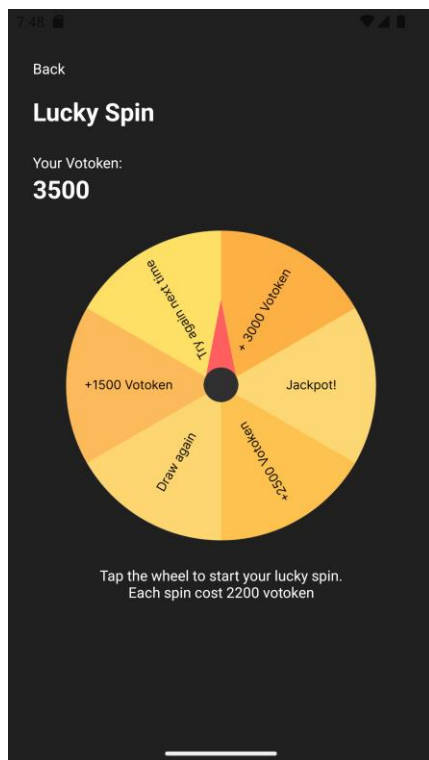

6. Order History Screen

After completing the transaction, the users can track their order status in this screen. They also can see the order's details such as the total price and the products that they bought before.

Users can go back to Home Screen to browse more camera to buy.

7. Lucky Spin Screen

This is the screen for the users to use their “Votoken”. They can spin a wheel by clicking the wheel and use their “Votoken” to get some special rewards. The needle from the wheel will rotate clockwise. The needle needs to rotate at least 3 times before stopping and point to the reward. And users will get the reward where the needle points. Each spin costs them 2200 Votoken. The prize pool are:

- +3000 Votoken
- Jackpot (get random Votoken between 15000 and 30000 inclusive)
- +2500 Votoken
- Draw again
- +1500 Votoken
- Try again next time

Users can go back to Home Screen to purchase another camera and get more Votoken.
